

SOLVANE DYNAMICS INC.

Employee Handbook — FY Current, v2.3

This document describes a fictional company, fictional employees, and fictional financial data. It was prepared for a retrieval-augmented generation (RAG) exercise.

Field	Value
Document ID	HR-HBK-CUR-v2.3
Version	2.3
Document owner	People and Culture
Effective date	01 April (current FY)
Intended audience	All employees, contractors, and interns
Classification	Confidential — fictional educational dataset

Local law and any signed individual agreement take precedence over this document where they provide a greater entitlement or a stricter control.

Contents

Section numbers are stable anchors used for retrieval and citation.

Section	Title
1	Company profile, mission, and values
2	Employment categories and responsibilities
3	Work modes and remote work eligibility
4	Weekly schedules and core collaboration hours
5	Remote workspace and company equipment
6	Information security and account access
7	Data classification and customer data
8	Acceptable use and generative AI tools
9	Communication and documentation standards
10	Leave and time away
11	Performance reviews and professional development
12	Compensation, expenses, and travel
13	Conduct, inclusion, and respectful work
14	Warehouse and site safety
15	Incident reporting
16	Conflicts of interest and ethics
17	Corrective action and employee concerns
18	Acknowledgement and policy contacts

1. Company profile, mission, and values

Solvane Dynamics Inc. (“Solvane”) designs autonomous mobile robots (AMRs) and fleet-orchestration software for third-party logistics warehouses. Solvane was founded in 2019 and is headquartered in Denver, Colorado, with an engineering and hardware validation site in Krakow, Poland. As of the end of Q3 of the current fiscal year, Solvane employs 176 people.

Our mission is to make warehouse fulfillment faster and safer without displacing the workforce that runs it. Values: **Ship reversible changes** (prefer small, tested releases over large unreviewed ones), **Measure before we claim** (performance statements must cite the test conditions), **Safety is not negotiable** (a delivery deadline never overrides a safety control), and **Own the whole outcome** (engineering is responsible for what happens at the customer site, not just in the lab).

2. Employment categories and responsibilities

Category	Typical arrangement	Notes
Regular full-time	40 hrs/week	Full standard benefits
Regular part-time	20–32 hrs/week	Benefits prorated where permitted
Fixed-term	Project-limited	End date stated in agreement
Intern	Supervised placement	No unsupervised lab or site access
Contractor	Services agreement	Access limited to assigned systems

Every employee is responsible for accurate records, timely escalation of risk, and keeping payroll and emergency contact information current. Managers may approve work mode, access, and schedule exceptions only within their delegated authority; a manager may not waive a security or safety control to meet a deadline.

3. Work modes and remote work eligibility

Solvane operates a role-based, not seniority-based, work mode policy. The signed job profile determines the default; the matrix below sets company-wide limits.

Role group	Max remote days/wk	Onsite anchor days	Approval
Software & Fleet-Ops Eng.	3	Tue, Wed	Manager
Product, Design, Data	3	Tue, Wed	Manager
Sales, Marketing, G&A	2	Tue, Wed, Thu	Manager
Customer Success	2	Coverage roster	Team lead
Hardware & Validation Eng.	1	4 lab days	Lab manager
Field Deployment Techs	As roster permits	Customer-site schedule	Regional ops

Remote work is a location, not a reduction in availability or responsibility. Remote days cannot be banked, transferred between weeks, or treated as leave. A documented medical accommodation follows a

separate accommodation process and may differ from this matrix. Working from a different country requires People, Legal, and Security approval in advance for tax and data-residency reasons.

Hardware and Validation Engineering normally works onsite four days per week because energized-equipment testing and mechanical calibration of AMR units cannot be performed safely as remote work; this is the one role group where the remote allowance is intentionally the smallest.

4. Weekly schedules and core collaboration hours

The standard workweek is Monday through Friday. All employees must normally be reachable from 9:30 AM to 2:30 PM Mountain Time on scheduled working days, regardless of work mode. Field assignments, approved leave, and documented accommodations are valid exceptions. Teams should publish their weekly work location by end of day Friday for the following week.

5. Remote workspace and company equipment

A remote workspace must support confidential conversation and stable connectivity. Company equipment remains Solvane property and may be recovered or remotely wiped. New hires receive a managed laptop, a hardware security key, and a one-time home-office allowance of up to \$650, reimbursable within 60 days of the start date. An ongoing internet stipend of up to \$35/month is available to fully remote-eligible employees.

Lost or potentially compromised equipment must be reported to the Security Hotline within 30 minutes of discovery — employees should not delay reporting to try to locate the device themselves first.

6. Information security and account access

Remote access to internal engineering, fleet-telemetry, or customer-support systems requires a managed company device, multi-factor authentication, and the Solvane VPN. Shared accounts are prohibited except for approved service accounts. Production and customer-fleet-configuration access uses time-bound privileged roles that are logged and reviewed monthly. Disabling endpoint protection, sending credentials over chat, or exposing a local development port to the public internet are all prohibited regardless of business justification.

7. Data classification and customer data

Warehouse camera and LIDAR data captured by deployed AMR fleets may contain people, vehicles, or facility layouts and is classified Restricted by default. Restricted data may not be downloaded to personal devices or personal cloud storage, and any approved export must record the ticket number, purpose, and retention period. Confidential data (contracts, employee records, unpublished financials) requires need-to-know access. Public data (approved marketing material) may be shared freely.

8. Acceptable use and generative AI tools

Company systems are for legitimate work; limited personal use is acceptable when lawful and infrequent. Employees may use only the AI tools listed in the approved tools register, and must never submit Restricted warehouse data, customer facility layouts, credentials, or unpublished financial figures to a public AI service. A human owner remains accountable for any AI-assisted deliverable, including generated code and written content.

9. Communication and documentation standards

Decisions that affect customers, safety, or product behavior must be recorded in the project record system and cannot remain only in chat or a meeting recording. Chat is for coordination, not final decisions or Restricted data. Meetings should have a published agenda and a named decision-owner; recording requires consent and a defined retention period.

10. Leave and time away

Leave type	Annual standard	Notice/evidence
Annual (vacation) leave	20 working days	10 days' notice for 3+ days
Sick leave	9 paid working days	Notify manager before core hours
Learning leave	3 paid working days	Approved development plan
Volunteer leave	2 paid working days	Approved community activity
Bereavement leave	3–5 paid days	Confirmed by People team
Parental leave	Per local plan/law	People team planning process

Before planned leave, employees identify an acting owner for open work and transfer access without sharing credentials. Health details are shared only with People and Culture, not broadly with the team.

11. Performance reviews and professional development

Performance is evaluated on outcomes, quality, collaboration, and safety — physical presence alone is not a performance measure, and remote employees are held to the same role expectations as onsite peers. Formal reviews occur twice yearly, in June and December. Regular employees may receive an annual development budget of up to \$1,000 with manager approval, tied to a current or planned capability.

Reviews must distinguish laboratory-validated performance from field-validated performance; a metric measured only in the Krakow test lab may not be presented as a guaranteed customer-site result.

12. Compensation, expenses, and travel

Business expenses must be necessary, reasonable, documented, and submitted within 15 calendar days of the expense. Employees may not approve their own expenses. Standard limits: daily meals during travel up to \$70 domestic / \$90 international; hotel at preferred rate or a justified alternative; rental cars require manager pre-approval. Compensation adjustments, where applicable, are processed following the December review cycle.

13. Conduct, inclusion, and respectful work

Solvane prohibits discrimination, harassment, retaliation, and bullying in offices, labs, customer sites, travel, and work-related online spaces. Concerns may be raised with a manager, People and Culture, or the confidential Ethics Channel; an employee does not need to confront the person involved before reporting. Retaliation for a good-faith report is itself a policy violation.

14. Warehouse and site safety

Only trained and authorized personnel may operate energized AMR prototypes, charging infrastructure, or warehouse lifting equipment. A task risk assessment is required before first use of new equipment or after a material change. Guards and emergency stops may never be removed to accelerate a test or demo. A near miss — a small change that could have caused harm — is reported with the same urgency as an actual injury.

15. Incident reporting

Event	Initial notification	Primary channel
Injury or exposed energy	Immediately after emergency action	Safety Hotline
Lost device or credential	Within 30 minutes	Security Hotline
Suspected customer data exposure	Within 30 minutes	Security Incident channel
Product safety defect	Immediately, before further use	Quality escalation
Major fleet-software outage	Within 15 minutes	Operations incident channel

16. Conflicts of interest and ethics

Employees must disclose personal interests that could affect, or appear to affect, judgment — for example, a financial interest in a supplier or customer, or supervising a close relative. Cash gifts are prohibited; modest business hospitality may be accepted when lawful and infrequent. Gifts above \$75 require written Ethics approval.

17. Corrective action and employee concerns

Corrective action is proportionate to severity and history and may range from coaching to termination. Violence, harassment, deliberate safety bypass, or intentional data disclosure may result in immediate serious corrective action. A report made in good faith is protected even if it is later not substantiated; knowingly false statements are themselves misconduct.

18. Acknowledgement and policy contacts

Topic	Primary owner	Contact route
Employment, leave, conduct	People and Culture	People portal
Security, identity, data	Information Security	Security Hotline
Warehouse and site safety	Health and Safety	Safety Hotline
Product quality	Quality and Reliability	Quality escalation
Ethics and conflicts	Legal and Ethics	Confidential Ethics Channel

Only the named policy owner may issue an authoritative interpretation of this handbook. Informal team practice does not amend the handbook.
